

β 2 (505). To the extent that information is displayed by the new method, the method effectively appears to run in the current page.--

Please replace the paragraph at page 35, lines 12-17 with the following:

β 3 --Figure 11 shows an ASP proxy object 704 located on server 701 and an ASP proxy object 705 located on a client 702. When an ASP object is loaded by a server, the property values are retrieved 706 (from wherever they are stored 703) and are placed into the proxy objects properties 704. Also, the proxy object's properties for the client are prepared and stored in ASP object 704 as well. During construction of the page, the proxy objects' properties may be accessed and modified by the server script. If modified, the properties may be sent back to the data storage 703 for future retrieval.--

In the Claims:

β 4 5. (Amended) The apparatus of claim 3, said apparatus further comprising:
Sub 17 design-time controls for controlling the generation of said objects when said design-time controls are placed within said first event-driven programs.

β 5 12. (Amended) The method of claim 10, further comprising the steps of:
controlling the generation of said objects with controls that operate during a design time when said controls are placed within said first event-driven programs.
